- Coolant Temperature Sensor: Offers data on engine temperature, influencing fuel mixture and cold start enrichment.
- MAP Sensor: Measures intake manifold pressure, crucial for calculating air mass and adjusting fuel accordingly.
- Oxygen Sensors: Located in the exhaust, they provide feedback on combustion efficiency, allowing the ECM to adjust air-fuel ratios dynamically.

Analytical Note: Sensor signals are analog voltage levels; deviations or signal noise can cause misfires, poor fuel economy, or emissions issues.

Actuator Controls

Outputs from the ECM directly influence engine operation:

- Fuel Injectors: ECM pulses injectors to deliver precise fuel amounts based on sensor data.
- Idle Air Control (IAC): Adjusts airflow at idle for smooth engine operation.
- Ignition Control: Sends signals to the ignition module for spark timing.

Proper wiring and functioning of these outputs are essential for engine responsiveness and efficiency.
