Question What is OBIEE and what are its main components? OBIEE (Oracle Business Intelligence Enterprise Edition) is a comprehensive suite of enterprise business intelligence tools. Its main components include BI Server (logical data access layer), BI Presentation Layer (user interface), BI Scheduler (report scheduling), BI Answers (ad-hoc reporting), BI Dashboards (visual dashboards), and BI Publisher (report publishing). **How does the OBIEE architecture work?** OBIEE architecture involves multiple layers: Data sources (databases), the BI Server which processes requests and manages logical data modeling, the Presentation Layer for user interaction, and the Web Server that hosts the BI portal. Users create reports and dashboards that query data through the BI Server, which retrieves and processes data from underlying sources. **What is a Repository (RPD) in OBIEE and how is it structured?** The RPD (Repository) is a metadata repository that

defines logical data models, physical data sources, and security settings. It has three main layers: Physical Layer (connects to data sources), Business Model and Mapping Layer (logical models of data), and Presentation Layer (user-visible objects). Explain the difference between a Logical Table and a Physical Table in OBIEE. A Physical Table represents the actual table in the database, while a Logical Table is an abstraction used in the Business Model layer to define how data is presented to users. Logical Tables are mapped to Physical Tables and can combine data from multiple sources. What are aggregate tables in OBIEE, and why are they used? Aggregate tables contain pre-summarized data at various levels of aggregation. They improve query performance by reducing the amount of data processed during report execution, especially for large datasets or complex calculations. How do you troubleshoot performance issues in OBIEE? Troubleshooting involves analyzing query logs, using the BI Server Diagnostics, checking for inefficient SQL queries, optimizing the RPD, creating aggregate tables, tuning the database, and reviewing report design for performance bottlenecks. What is a Prompt in OBIEE and how is it used? A Prompt is an interactive filter that allows users to select values dynamically at runtime, which then filters the data displayed in reports or dashboards. Prompts enhance report interactivity and user control over data views. Can you explain the difference between 'Session Variables' and 'Repository Variables' in OBIEE? Repository Variables are static variables defined in the RPD used for configuration or setting default values. Session Variables are dynamic variables set at runtime for individual user sessions, often used to personalize reports or control access.
