Question 1: The Impact of Lifestyle on Health

Question:

Describe the effects of smoking on the respiratory system. (2 marks)

Sample Answer:

Smoking damages the cilia lining the respiratory tract, leading to a build-up of mucus and increased risk of respiratory infections. It also causes lung diseases such as chronic bronchitis and emphysema.

Explanation:

- Damage to cilia impairs the removal of mucus and pathogens.
- Long-term smoking can lead to diseases like COPD.

Tips:

- Focus on specific effects and their consequences.
- Use clear, concise language.

Question 2: The Role of Vaccinations

Question:

Explain how vaccinations help prevent the spread of infectious diseases. (3 marks)

Sample Answer:

Vaccinations introduce a weakened or inactive form of a pathogen, stimulating the immune system to produce antibodies. This creates immunity, so if the person is exposed to the disease later, their body can respond quickly and prevent infection.

Explanation:

- Vaccines train the immune system.
- They reduce the number of susceptible individuals.
- This leads to herd immunity, protecting the whole community.

Tips:

- Mention both individual and community benefits.
- Use keywords like 'stimulates immune response' and 'herd immunity'.

Question 3: Ecosystems and Biodiversity

Question:

Describe how human activity can reduce biodiversity. (4 marks)

Sample Answer:

Human activities such as deforestation, pollution, overfishing, and urban development destroy habitats and directly kill species. This leads to a loss of biodiversity as fewer habitats are available for organisms to survive and reproduce.

Explanation:

- Deforestation reduces forest habitats.
- Pollution contaminates water and soil, harming ecosystems.
- Overfishing depletes fish populations.
- Urbanization fragments habitats, making it hard for species to migrate or find resources.

Tips:

- List multiple activities and their impacts.
- Connect activities to habitat loss and species decline.

Question 4: The Water Cycle and Human Impact

Question:

Explain how human activities can affect the water cycle. (3 marks)

Sample Answer:

Activities like deforestation reduce transpiration and rainfall, while urbanization increases runoff and reduces groundwater recharge. Pollution from factories and agriculture can contaminate water sources.

Explanation:

- Deforestation decreases evaporation.
- Urban areas increase surface runoff.
- Pollution leads to unsafe drinking water and harm to aquatic life.

Tips:

- Use the water cycle terminology: evaporation, transpiration, runoff, infiltration.
- Highlight both physical changes and pollution.

Question 5: Using Biological Knowledge in Medicine

Question:

Describe how knowledge of enzymes is used in the production of antibiotics. (3 marks)

Sample Answer:

Enzymes are used to manufacture antibiotics by catalyzing specific chemical reactions in the production process. They help to increase yield, speed up production, and improve the purity of the antibiotic.

Explanation:

- Enzymes like penicillin acylase are used in biosynthesis.
- They enable more efficient and cost-effective production.

Tips:

- Link enzyme function to industrial processes.

- Mention benefits such as increased efficiency and sustainability.

In-Depth Analysis of Key Questions from the May 2013 Paper

Question 1: Cell Division and the Role of Mitosis

Sample Question:

Describe the process of mitosis and explain its importance in the growth of multicellular organisms.

Model Answer Breakdown:

- Mitosis Process:

- The cell duplicates its genetic material during DNA replication.
- The duplicated chromosomes line up at the cell's equator.
- Spindle fibers attach to chromosomes and pull sister chromatids apart.
- Sister chromatids move to opposite poles of the cell.
- The cell membrane pinches in, dividing the cytoplasm (cytokinesis), resulting in two genetically identical daughter cells.

- Importance in Growth:
- Mitosis enables organisms to grow by increasing cell number.
- It replaces damaged or dead cells, maintaining tissue health.
- Ensures genetic consistency across cells, essential for proper functioning.

Analysis Tips:

When explaining processes like mitosis, include clear step-by-step descriptions, diagrams if possible, and link the process to its biological significance.

Question 2: Genetics and Inheritance

Sample Question:

Explain how the inheritance of sex chromosomes determines whether an individual is male or female.

Model Answer Breakdown:

- Humans have 23 pairs of chromosomes, with one pair being sex chromosomes.
- Females have two X chromosomes (XX).
- Males have one X and one Y chromosome (XY).
- The sex of the offspring is determined by the sperm:
- Sperm carrying an X chromosome fertilizes the egg ? female (XX).
- Sperm carrying a Y chromosome fertilizes the egg ? male (XY).

- The Y chromosome contains genes responsible for male characteristics.
- Therefore, the presence or absence of the Y chromosome determines sex.

Analysis Tips:

Make sure to explain the role of the sex chromosomes clearly and relate genetic inheritance to biological outcomes.
